

Large Caps Go Contrarian

Summary and Recommendation

Nineteen of twenty large cap buy recommendations now trade below the 200-day average stock price signaling a downtrend by that measure. At the same time, lower McDep Ratios suggest increased appreciation potential. In the face of a declining stock price trend, a buy recommendation on the basis of McDep Ratio becomes a Contrarian Buy. Only a month ago, just 4 of 25 large cap buy recommendations were designated contrarian. Persisting in the slide of the past three weeks, oil price measured by six-year futures at \$81 a barrel settled below the 40-week average of \$86 (see charts on page 2, Six-Year Commodity Price Meter and Six-Year and One-Year Natural Gas and Oil Futures). Since \$81 is still above \$75 that we use in estimating McDep Ratios we make no change in value estimates as a result.

We are optimistic that market fears may be relieved within a few months. We believe that a positive trend in global economic growth is likely despite sharp reversals in the currency markets. It looks to us like the euro currency essentially may be taking back the devaluation of the dollar that it tolerated in the past decade. That devaluation probably contributed to relatively better economic performance for the U.S. versus Europe and now Europe may see relatively better economic activity with a lower currency. Pegged to the U.S. currency, the Chinese renminbi did not tolerate dollar devaluation, much to the consternation of vocal political sentiment in the U.S. Thus, global growth may be redistributed some by currency shifts, but not reduced necessarily.

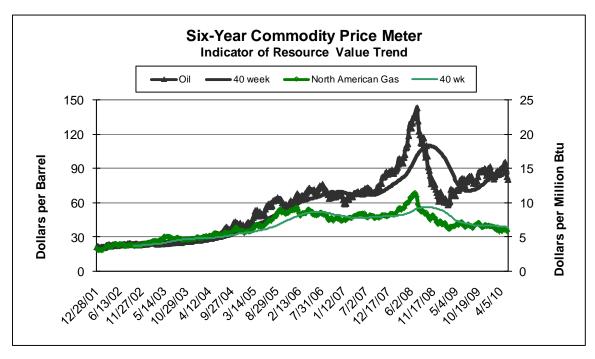

Among recent developments, Contrarian Buy-recommended **ExxonMobil** (**XOM**)'s acquisition of XTO Energy passed an important timeline on May 20 when XTO disclosed a June 25 date for a special shareholder's meeting. We expect the merger to be completed soon after a favorable vote and by XOM's target date of June 30. After that it seems likely that XOM would step up purchase of its own stock, which has slowed somewhat during the merger event.

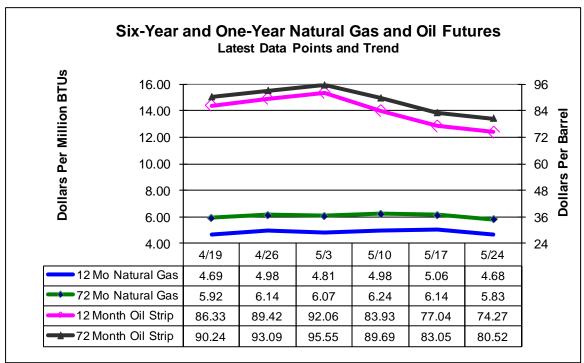

Investors who have patiently held **BP plc** (**BP**) stock during adverse publicity might get positive reinforcement in a few days if a "top kill" procedure succeeds in stopping the oil flow from a wild well in the Gulf of Mexico. Nor should investors be overly discouraged by stock price action the past few weeks. At the latest close, BP stock has a McDep Ratio of 0.58, a hair above Contrarian Buy-recommended **Total** (**TOT**) at 0.57, the lowest in our European group (see Tables 1-3, pages 3-5). Though that is down from 0.66 three weeks ago when both BP and TOT were at the same McDep Ratio, there has been no further relative depreciation in BP stock.

Disclaimer: This analysis was prepared by Kurt Wulff, Manager of McDep LLC. The firm used sources and data believed to be reliable, but makes no representation as to their accuracy or completeness. This analysis is intended for informational purposes and is not a solicitation to buy or sell a security. Past performance is no guarantee of future results.

McDep or its employees may take positions in stocks the firm covers for research purposes. No trades in a subject stock shall be made within a week before or after a change in recommendation.

Certification: I, Kurt H. Wulff, certify that the views expressed in this research analysis accurately reflect my personal views about the subject securities and issuers. No part of my compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in this research analysis.

Research Methodology/Ratings Description: McDep LLC is an independent research originator focused on oil and gas stocks exclusively. The firm applies the forty years of experience of its analyst to estimate a present value of the oil and gas resources and other businesses of covered companies. That value is compared with a company's stock market capitalization and debt. Stocks with low market cap and debt relative to present value tend to outperform stocks with high market cap and debt relative to present value. Buy recommendations are expected to deliver a total return better than 7% per year above inflation. Hold recommendations assume the attributes of the underlying business are reflected in the current price of the stock. Sell recommendations are expected to deliver a total return less than inflation.
