CVX, RDS, SU Promise High Oil Returns

Summary and Recommendation

Oil-oriented buy recommendations Chevron (CVX), Royal Dutch Shell (RDS) and Suncor (SU) need a long-term oil price of just \$56 a barrel to deliver an estimated unlevered total return of 7% a year before inflation as implied by latest McDep Ratios of 0.72, 0.78 and 0.75 respectively (see Tables 1-4 on pages 2-5). Realized return may be higher since six-year futures price for oil settled on September 13 at \$86.45 a barrel. The timing of new commitments may also be supported by price uptrends with the three stocks trading above their 200-day averages. Six-year oil, too, has also crossed above its 40-week average of \$85.96 a barrel (see chart below Six-Year Commodity Price Meter and chart Six-Year and One-Year Natural Gas and Oil Futures on page 7). At the same time, declining confidence in U.S. political leadership may be a concern. The persisting threat to punish successful oil companies with discriminatory taxes is disturbing from a fairness point of view. Yet, the portfolio impact is lessened by likely reduced supply that would drive up oil price and by participation in the corresponding higher oil profits outside the U.S. RDS and SU are headquartered outside the U.S. CVX has the option of reincorporating outside the U.S. as some have done, unpatriotic as that may seem. Fortunately, investors usually become more confident as we get past November mid-term elections either because the current leadership changes course or in anticipation that the current leadership will be replaced.

A Weekly Analysis of Large Cap Oil and Gas Stocks September 14, 2010

Disclaimer: This analysis was prepared by Kurt Wulff, Manager of McDep LLC. The firm used sources and data believed to be reliable, but makes no representation as to their accuracy or completeness. This analysis is intended for informational purposes and is not a solicitation to buy or sell a security. Past performance is no guarantee of future results.

McDep or its employees may take positions in stocks the firm covers for research purposes. No trades in a subject stock shall be made within a week before or after a change in recommendation.

Certification: I, Kurt H. Wulff, certify that the views expressed in this research analysis accurately reflect my personal views about the subject securities and issuers. No part of my compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in this research analysis.

Research Methodology/Ratings Description: McDep LLC is an independent research originator focused on oil and gas stocks exclusively. The firm applies the forty years of experience of its analyst to estimate a present value of the oil and gas resources and other businesses of covered companies. That value is compared with a company's stock market capitalization and debt. Stocks with low market cap and debt relative to present value tend to outperform stocks with high market cap and debt relative to present value. Buy recommendations are expected to deliver a total return better than 7% per year above inflation. Hold recommendations assume the attributes of the underlying business are reflected in the current price of the stock. Sell recommendations are expected to deliver a total return less than inflation.
