## Invest 30-40% in Natural Gas, Half in Oil

### **Summary and Recommendation**

Most of our large cap Buy recommendations appear to be in a rising stock price trend again. The change is evident in only a few stocks having the Contrarian qualifier ahead of Buy, which we created early in 2010 to flag a downtrend in stock price measured by the 200-day average (see <u>Tables 1-4</u> on pages 2-5). A rising price trend may be a comfort factor in timing new commitments, while low McDep Ratios provide the fundamental justification. We suggest that a McDep Energy Portfolio be concentrated half in the first three groups of larger companies -U.S.Integrated, Europe and Australia/Brazil/China/Russia. The other half would be in the combination of U.S. Independent, Canada and Income and Small Cap. We further suggest that selections be skewed to lower McDep Ratio stocks and be balanced about half in oil production and 30-40% in natural gas. The remainder would automatically be in other businesses, mostly downstream. Rising stock prices are supported by the rising quote for oil for the next six years (see chart below Six-Year Commodity Price Meter and chart Six-Year and One-Year Natural Gas and Oil Futures on page 7). Though six-year natural gas price is below the 40-week average, it is holding above the September low. Finally, most of the political trends support energy price – from restricting oil and gas supply with whimsical regulations to unproductive government spending financed by printing money.

A Weekly Analysis of Large Cap Oil and Gas Stocks October 19, 2010

**Disclaimer:** This analysis was prepared by Kurt Wulff, Manager of McDep LLC. The firm used sources and data believed to be reliable, but makes no representation as to their accuracy or completeness. This analysis is intended for informational purposes and is not a solicitation to buy or sell a security. Past performance is no guarantee of future results.

McDep or its employees may take positions in stocks the firm covers for research purposes. No trades in a subject stock shall be made within a week before or after a change in recommendation.

**Certification:** I, Kurt H. Wulff, certify that the views expressed in this research analysis accurately reflect my personal views about the subject securities and issuers. No part of my compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in this research analysis.

Research Methodology/Ratings Description: McDep LLC is an independent research originator focused on oil and gas stocks exclusively. The firm applies the forty years of experience of its analyst to estimate a present value of the oil and gas resources and other businesses of covered companies. That value is compared with a company's stock market capitalization and debt. Stocks with low market cap and debt relative to present value tend to outperform stocks with high market cap and debt relative to present value. Buy recommendations are expected to deliver a total return better than 7% per year above inflation. Hold recommendations assume the attributes of the underlying business are reflected in the current price of the stock. Sell recommendations are expected to deliver a total return less than inflation.
