A Weekly Analysis of Energy Stocks Using the McDep Ratio July 10, 2007

Natural Gas Price Extremely Low

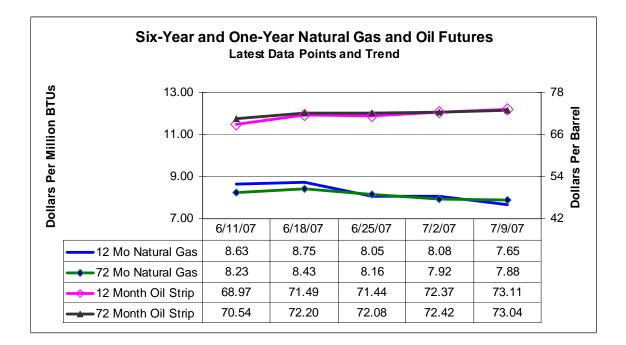

Summary and Recommendation

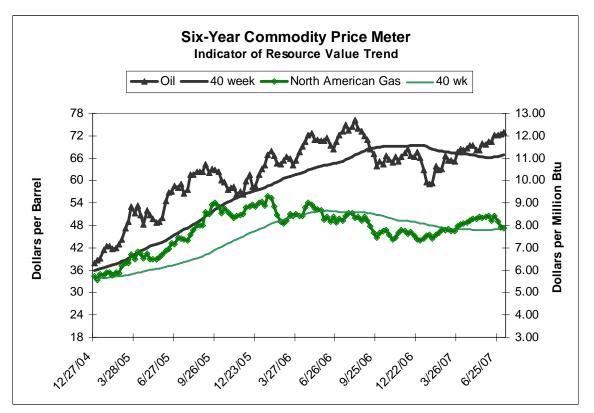

With the ratio of oil price to natural gas price reaching 9.3, the relative value of natural gas has fallen to its lowest level in the six years long-term quotes have been publicly available (see chart below, <u>Oil/Natural Gas Futures Ratio</u>). Long-term natural gas price is nearly as low as it can be, now \$7.88 a million btu, while staying in an uptrend above the 40-week average we calculate at \$7.85 (see charts <u>Latest Data Points and Trend</u>, <u>Six-Year Commodity Price Meter</u>, page 2). A potential change in trend would be a contradiction to crude oil price that is in a strong uptrend and refined products prices that continue near record levels compared to crude oil. In that case, natural gas investors may need more patience until an uptrend is restored for the clean fuel. Meanwhile a reversal of natural gas price to the upside could occur just as rapidly as the recent decline. We advocate managing portfolio concentration toward 41% on natural gas, 50% on crude oil, 8% on downstream, mostly refining and marketing, and 47% on companies headquartered outside the U.S. (see table <u>Composite of Buy Recommendations</u>, page 5).

Kurt H. Wulff, CFA
