# My Visit to Russia

## **Summary and Recommendation**

Highlighted by meetings with executives of buy-recommendations Gazprom (OGZPY) and Lukoil (LUKOY), I had a memorable first visit to Russia last week (see pictures, pages 4-5). I also glimpsed first-hand the cultural legacy of the country while touring its current and former capital cities, Moscow and St. Petersburg. I travelled alone while trusting two excellent local guides, one in each city, both provided by an American travel agent with long experience in Russia. It was an adventure to explore new places safely and it was rewarding to meet warm and friendly people who work hard for a better life. Adventure may also describe investment in Russian stocks as demonstrated by last year's stock price volatility. My thesis for including Russian investments in a diversified portfolio is a motivated government will seek long-term growth in a global economy that enriches Russia and by necessity must also reward international investors. Success will be measured by higher stock prices. Stock prices will be higher only if investors see appropriate reward.

### **Russian Pride**

Like people everywhere, Russians take pride in their achievements. Despite communism's antipathy to the monarchy, the government directed support to restoring historic palaces. After communism, cathedrals were restored. The accumulation of wealth in the form of gold, precious stones, and fine craftsmanship in glorious structures is startling.

There are many smart and talented Russians, of course. One of my favorites is the 19<sup>th</sup> century chemist, Dmitri Mendeleev, the inventor of the Periodic Table of Elements. Another is a current national hero, Irina Rodnina, the all-time great pairs figure skater.

The Kremlin, a symbol of a controlling government, also showcases history. I once pictured the Kremlin as a building that looked like what turns out to be Lubyanka, the former KGB headquarters. Instead the Kremlin, or ancient fortress, surrounds cathedrals and museums along with an office building for President Medvedev. The Assumption Cathedral in which all the tsars were crowned is practically gold clad, it seems to have so much of the precious metal. The Armory Museum does have ancient armor that Russians used to repel the Mongols who dominated the country in its early history. Otherwise the Armory is better known for its collection of Faberge eggs. The tsar's coaches are also on display looking just as I envisioned in fairy tales.

Steeped in the knowledge that Communism was atheist, I was surprised to see churches and cathedrals seemingly everywhere. The government supports the Russian Orthodox religion again and likely controls it. Apparently there are also choices for those seeking solace away from the government religion.

### **Government Control**

In the Putin years, the government has reasserted its control over the economy. As a result, Russians have respect for order. No graffiti in public places and no trash on the streets. The air above central Moscow was mostly clear during my visit and seemed clean.

Journalistic expression is controlled by government ownership of the media. Illustrating that, the tallest structure in Moscow appears to be a communications tower standing over the downtown skyline. As it looks like a needle, some of the locals apparently refer to it as the "ideological injection".

## **Russia Rising with Resources to Export**

I am optimistic about Russia with the hope that well-publicized problems and challenges can be overcome. The daily facts are on the side of hope as evidenced by the price of the ruble, the Russian currency, above its 200-day average relative to the dollar and stock prices of Gazprom and Lukoil also above their 200-day average. Of course, that still doesn't guarantee tomorrow when trends could change without notice. Investors need to be vigilant.

Russia's appeal to me lies in its natural resources, particularly natural gas and oil. Other Arctic and near-Arctic countries and states, including Norway, Canada and Alaska have similar appeal. Investors have a history of making money in the latter, subject to setbacks from time to time. Changes in the rules of the game as occurred in Alaska and Alberta are discouraging. Norway has the highest tax rate, but at least it hasn't changed much in 30 years and companies can invest accordingly. Russia has only a short history as a market oriented country and there have been large disappointments for international investors along with better experience recently.

## **Opportunity in the International Capital Markets**

What's missing in the resource picture is financing for development. Historically, a strong government just took what it needed. Peter the Great, the founder of St. Petersburg in 1703, built the city from scratch with military labor, we understand. Catherine the Great, whose art collection formed the core of the Hermitage Museum, apparently financed her monarchy in part with the labor of serfs and the spoils of conquest. Coincidentally, Tsar Alexander II freed Russian serfs beginning in 1861, the same year President Abraham Lincoln began freeing U.S. slaves. Joseph Stalin apparently built the magnificent, museum quality, underground subway stations in the 1930s with the labor of political prisoners.

Today, the international financial markets are well-suited to provide the capital to develop Russian energy resources, either through Russian companies or international companies. Companies with high stock prices can raise capital on the most efficient terms. Stock prices go up when companies make money. The most important factor influencing profitability in Russia is

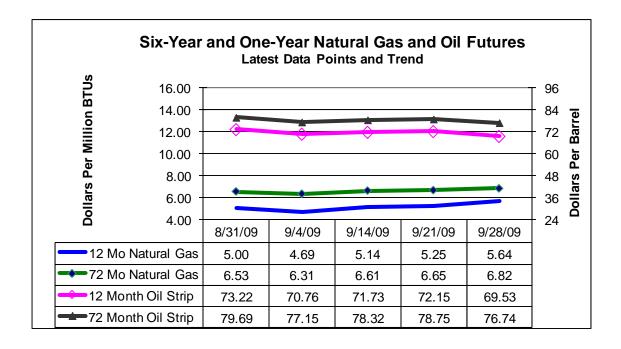

government policy. By relaxing excise taxes and price controls, the government can make the companies more profitable.

The same week I was in the two cities, Prime Minister Putin was entertaining international oil executives at a conference in the Arctic on the Yamal Peninsula, the location of the country's largest undeveloped natural gas resources. It is welcome news that international companies are being invited again to invest alongside Russian companies. As long as a country needs new investment, existing companies should do well. Though conditions can change and there is a long way to go, the trends appear better for now.

## Weekly Six-Year Natural Gas Price above 40-Week Average

Lastly, the industry backdrop looks positive with an upward price trend for both oil and natural gas. Latest settlement prices for the average of futures for the next six years at \$77 a barrel are above the 40-week average of \$72 (see chart below, <u>Six-Year and One-Year Natural Gas and Oil Futures</u> and chart on page 6, <u>Six-Year Commodity Price Meter</u>). The current quote of \$6.82 for six-year natural gas exceeds the 40-week average of \$6.73, perhaps the beginning of the long-awaited break to the upside.

**Disclaimer:** This analysis was prepared by Kurt Wulff, Manager of McDep LLC. The firm used sources and data believed to be reliable, but makes no representation as to their accuracy or completeness. This analysis is intended for informational purposes and is not a solicitation to buy or sell a security. Past performance is no guarantee of future results.

McDep or its employees may take positions in stocks the firm covers for research purposes. No trades in a subject stock shall be made within a week before or after a change in recommendation.

**Certification:** I, Kurt H. Wulff, certify that the views expressed in this research analysis accurately reflect my personal views about the subject securities and issuers. No part of my compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in this research analysis.

Research Methodology/Ratings Description: McDep LLC is an independent research originator focused on oil and gas stocks exclusively. The firm applies the forty years of experience of its analyst to estimate a present value of the oil and gas resources and other businesses of covered companies. That value is compared with a company's stock market capitalization and debt. Stocks with low market cap and debt relative to present value tend to outperform stocks with high market cap and debt relative to present value. Buy recommendations are expected to deliver a total return better than 7% per year above inflation. Hold recommendations assume the attributes of the underlying business are reflected in the current price of the stock. Sell recommendations are expected to deliver a total return less than inflation.
