Return of Defensive Rebalancing

Summary and Recommendation

Now that six-year oil is a third of the way back to its high and a few buy-recommended stocks are trading above a McDep Ratio of 1.0, investors might look again at preserving profits along with taking advantage of low stock prices (see chart Six-Year Commodity Price Meter below, valuation tables pages 2-4 and chart Six-Year and One-Year Natural Gas and Oil Futures on page 6). Currently, all of the trends are positive with stock prices and commodity prices above the 200-day or 40-week averages. We hope those positive trends last for at least a few years, but we cannot know that. Defensive rebalancing can be an automatic process to preserve gains and maintain broad energy exposure. The technique requires picking a target portfolio weight and sticking with it for awhile. If so, we would automatically trade higher McDep Ratio stocks for cash should the percentage move up and trade cash for lower McDep Ratio stocks should the percentage move down. We might apply the same idea to groups of oil and gas stocks, for example, striving for an equal market cap and debt in each of six groups; five large cap and one small cap, in our coverage (see tables). Actual weights may be a matter of individual preference. In our case, energy stocks approach 60% of our investable assets with most of the remainder in inflation linked government debt, fixed income, gold and cash. Focusing on analysis, we do not trade much. As a result we may rebalance, but at a deliberate pace.

Kurt H. Wulff, CFA

A Weekly Analysis of Large Cap Oil and Gas Stocks October 27, 2009

Disclaimer: This analysis was prepared by Kurt Wulff, Manager of McDep LLC. The firm used sources and data believed to be reliable, but makes no representation as to their accuracy or completeness. This analysis is intended for informational purposes and is not a solicitation to buy or sell a security. Past performance is no guarantee of future results.

McDep or its employees may take positions in stocks the firm covers for research purposes. No trades in a subject stock shall be made within a week before or after a change in recommendation.

Certification: I, Kurt H. Wulff, certify that the views expressed in this research analysis accurately reflect my personal views about the subject securities and issuers. No part of my compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in this research analysis.

Research Methodology/Ratings Description: McDep LLC is an independent research originator focused on oil and gas stocks exclusively. The firm applies the forty years of experience of its analyst to estimate a present value of the oil and gas resources and other businesses of covered companies. That value is compared with a company's stock market capitalization and debt. Stocks with low market cap and debt relative to present value tend to outperform stocks with high market cap and debt relative to present value. Buy recommendations are expected to deliver a total return better than 7% per year above inflation. Hold recommendations assume the attributes of the underlying business are reflected in the current price of the stock. Sell recommendations are expected to deliver a total return less than inflation.
