Analysis of Oil & Gas Stocks August 20, 2010

Mid-Term Election Year Prospects

Summary and Recommendation

We believe that long-term investment in oil and gas income and small cap stocks will be rewarding from mid-term election year price levels. There is a positive trend for small cap buy recommendations indicated by stock prices above the 200-day average, but those are among the exceptions in the broader market. The lack of positive overall direction is typical in the second year of the presidential cycle leading up to the U.S. elections in November, in our experience. There is heightened concern whether the course of the global economy will bring growth, inflation or deflation. Growth prospects are strong in developing countries with consequent increasing demand for energy. In developed countries, particularly the U.S., capital has gone on strike in anticipation of higher taxation next year in the absence of legislative action. Investments aren't being made because of lack of confidence in political leadership that promotes too much wasteful government spending, in our opinion. Yet, someone has to invest and spend in order for economic activity to grow. We think deflation is too demoralizing for hard-working people and should be avoided if at all possible. We believe that lower taxation, or at least the assurance of no increase, is the better way to promote growth by stimulating more efficient private investment, which in turn creates jobs and income for consumer spending. In our own case, we expect that any money we save that would otherwise go to taxes will go into equity investment. In the past, whether through growth or inflation, the resolution of political uncertainty surrounding elections in the middle of the four year presidential term usually has been followed by better stock prices in the ensuing two years. A rising stock market is necessary for the long-term economic success that most voters want.

Analysis of Oil & Gas Stocks August 20, 2010

Disclaimer: This analysis was prepared by Kurt Wulff, Manager of McDep LLC. The firm used sources and data believed to be reliable, but makes no representation as to their accuracy or completeness. This analysis is intended for informational purposes and is not a solicitation to buy or sell a security. Past performance is no guarantee of future results.

McDep or its employees may take positions in stocks the firm covers for research purposes. No trades in a subject stock shall be made within a week before or after a change in recommendation.

Certification: I, Kurt H. Wulff, certify that the views expressed in this research analysis accurately reflect my personal views about the subject securities and issuers. No part of my compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in this research analysis.

Research Methodology/Ratings Description: McDep LLC is an independent research originator focused on oil and gas stocks exclusively. The firm applies the thirty years of experience of its analyst to estimate a present value of the oil and gas resources and other businesses of covered companies. That value is compared with a company's stock market capitalization and debt. Stocks with low market cap and debt relative to present value tend to outperform stocks with high market cap and debt relative to present value. Buy recommendations are expected to deliver a total return better than 7% per year above inflation. Hold recommendations assume the attributes of the underlying business are reflected in the current price of the stock. Sell recommendations are expected to deliver a total return less than inflation.
