#### **Summary and Recommendation**

New commitments to buy-recommended **Cimarex Energy** (**XEC**) appear to be more timely on the basis of a low 0.77 McDep Ratio, conservative 0.06 ratio of debt to present value, low 6.3 multiple of unlevered cash flow (EV/Ebitda) and lowest 0.78 ratio of enterprise value to 52-week high. A favorable oil price trend has rewarded management's quick adjustment to emphasize oil drilling. Now a developing turn upward in natural gas price promises profits for many years in Cimarex's shale gas resources. A recent crossing above the 40-week average of six-year natural gas futures is being reinforced by the trend in the 40-week average also turning up. Price trends are an early indicator that consumers are turning increasingly to the bargain fuel and that the burst in supply, spurred by horizontal multi-stage fracturing, is transforming to steady growth. Investors can take advantage of the macro, or big picture, trends in oil and gas by owning shares of companies like Cimarex that are well positioned by the micro, or detailed, valuation measures.

## Six-Year Natural Gas Confirming New Price Uptrend

Near the end of the first quarter of 2011, the futures price for the delivery over the next six years of Louisiana natural gas traded above its 40-week average for the first time on a sustained basis in three years. The confirming indicator for a sustained move is falling into place with the slope of the 40-week average also turning up. Today the upturn is measurable if barely perceptible (see chart <u>Six-Year Futures Strip</u> on page 3). That slope will automatically be steepening as lower prices from 40-weeks ago in the late summer and early fall of 2010 drop out of the 40-week average. If new prices continue near the current level, they will automatically be higher than 40-

May 27, 2011

weeks ago and the slope of the 40-week average will continue up. The significance of such a detailed discussion is that natural gas may finally be starting the uptrend displayed by oil and the stock market for the past two years.

## Natural Gas and Oil Balance at Low Relative Valuation

Among small cap independent producers, Cimarex is concentrated 45% by value on natural gas and 55% on oil (see <u>Table ISC-1</u> on page 4). Since most large cap stocks are most concentrated on oil, an important reason for our interest in small caps is to gain natural gas exposure. Though XEC has reduced its natural gas exposure in recent years, the remaining exposure is still higher than average and something we want to have. At a McDep Ratio near the low end of the range, XEC's combined oil and gas resources appear to be priced at a larger discount in the stock market to what we think they are worth on a fundamental basis.

## Lowest Financial Risk

A low level of debt lends added comfort to investors in Cimarex (see Debt/Present Value in Table ISC-2 on page 5). Investors who think management is too conservative can add their own risk by owning more stock.

## Lowest Cash Flow Multiple

Lowest cash flow multiple (EV/Ebitda) of 6.3 is a telling indicator of relative value that is independent of our more subjective estimate of present value that helps determine the McDep Ratio (see <u>Table ISC-3</u> on page 6). The multiple also coincides with a short reserve life of 7.2. We put a heavy weight on reserve life in estimating present value. Yet, we might ask if management is just being more conservative as it is on debt? Most likely there are reserves likely to be classified as proven in the Cana shale of Oklahoma that might double XEC's corporate total.

## Most Stock Price Underperformance Recently

Lagging stock price when combined with low valuation can be a good indicator of timing for future appreciation to begin again. Cimarex is down the most from its 52-week high of \$118 a share and its 50-week average of \$105 (see Table ISC-4 on page 7).

## Stock Price May Have Reacted to Lower Gulf Coast Volume

Prolific, but short-lived production that boosted Gulf Coast results in 2010 has tapered off for the remainder of 2011 according to company guidance (see chart Volume by Region on page 8). To us, timing is always a surprise, but the fact of the decline is not. The company has regularly made thorough disclosures of its Gulf Coast operations. Some of the decline has been taken deliberately and will be offset by lower daily volumes lasting longer.

## Income and Small Cap Weekly

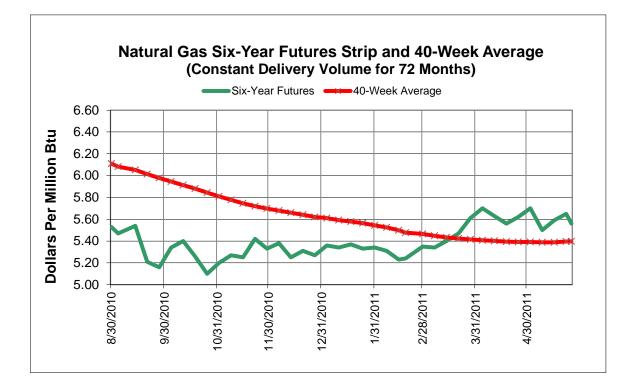

Analysis of Oil & Gas Stocks May 27, 2011

Management expects an acceleration of production in the Permian and Midcontinent regions to keep overall corporate volumes growing. Here, too, there is always some uncertainty. We see that violent tornados in the past few days have damaged facilities near XEC's Oklahoma operations.

## Net Present Value (NPV) Amply Supported by Cash Flow and Reserve Life

NPV of \$120 a share looks solid on a basis comparable to what we use for all stocks in our coverage (see table <u>Functional Cash Flow and Present Value</u> on page 8). The estimate incorporates latest quarterly results and projects volumes within management guidance (see <u>Next Twelve Months Operating and Financial Performance</u> on page 9).

Kurt H. Wulff, CFA

## Income and Small Cap Weekly

Analysis of Oil & Gas Stocks May 27, 2011

**Disclaimer:** This analysis was prepared by Kurt Wulff, Manager of McDep LLC. The firm used sources and data believed to be reliable, but makes no representation as to their accuracy or completeness. This analysis is intended for informational purposes and is not a solicitation to buy or sell a security. Past performance is no guarantee of future results.

McDep or its employees may take positions in stocks the firm covers for research purposes. No trades in a subject stock shall be made within a week before or after a change in recommendation.

**Certification:** I, Kurt H. Wulff, certify that the views expressed in this research analysis accurately reflect my personal views about the subject securities and issuers. No part of my compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in this research analysis.

**Research Methodology/Ratings Description:** McDep LLC is an independent research originator focused on oil and gas stocks exclusively. The firm applies the thirty years of experience of its analyst to estimate a present value of the oil and gas resources and other businesses of covered companies. That value is compared with a company's stock market capitalization and debt. Stocks with low market cap and debt relative to present value tend to outperform stocks with high market cap and debt relative to present value. Buy recommendations are expected to deliver a total return better than 7% per year above inflation. Hold recommendations assume the attributes of the underlying business are reflected in the current price of the stock. Sell recommendations are expected to deliver a total return less than inflation.
