Analysis of Oil & Gas Stocks July 1, 2011

Shale Strategy

Summary and Recommendation

Technological innovation in producing oil and gas from shale formations is part of the economic achievement worth celebrating on the birthdays of Canada and the U.S. on July 1 and July 4. Income and Small Cap buy recommendations offering rising oil production include Whiting (WLL) and Enerplus (ERF) in the Bakken formation and Petrohawk (HK) in the Eagle Ford. Buys offering rising natural gas production include **Birchcliff (BIREF)** in the Alberta Montney, Range Resources (RRC) in the Marcellus and Dorchester Minerals (DMLP) in the Fayetteville. At favorable global conditions, oil producers are proving the economic principle that higher price stimulates new supply which is good for general economic well-being. Technological innovation in natural gas has produced enough new supply to keep natural gas price at an extraordinary bargain compared to oil. We believe investors should build positions in buy recommendations or complementary stocks while being guided by the McDep Ratio and the balance of natural gas and oil (see <u>Table ISC-1</u> and <u>Table ISC-2</u>). Ranking by EV/Ebitda parallels ranking by McDep Ratio illustrating how much or how little valuation depends on future cash flow (see Table ISC-3). Because shale oil and shale gas exploitation is still in the early stages, future volume potential appears vast. Oil drilling is supported by a rising price trend with the recent settlement of six-year futures at \$100 a barrel compared to the 40-week average of \$96.

Analysis of Oil & Gas Stocks July 1, 2011

Disclaimer: This analysis was prepared by Kurt Wulff, Manager of McDep LLC. The firm used sources and data believed to be reliable, but makes no representation as to their accuracy or completeness. This analysis is intended for informational purposes and is not a solicitation to buy or sell a security. Past performance is no guarantee of future results.

McDep or its employees may take positions in stocks the firm covers for research purposes. No trades in a subject stock shall be made within a week before or after a change in recommendation.

Certification: I, Kurt H. Wulff, certify that the views expressed in this research analysis accurately reflect my personal views about the subject securities and issuers. No part of my compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in this research analysis.

Research Methodology/Ratings Description: McDep LLC is an independent research originator focused on oil and gas stocks exclusively. The firm applies the thirty years of experience of its analyst to estimate a present value of the oil and gas resources and other businesses of covered companies. That value is compared with a company's stock market capitalization and debt. Stocks with low market cap and debt relative to present value tend to outperform stocks with high market cap and debt relative to present value. Buy recommendations are expected to deliver a total return better than 7% per year above inflation. Hold recommendations assume the attributes of the underlying business are reflected in the current price of the stock. Sell recommendations are expected to deliver a total return less than inflation.
