

MCDEP Income and Small Cap Weekly

Analysis of Oil & Gas Stocks April 20, 2012

Good Stuff

Summary and Recommendation

In an active week of making research contacts we received solid reinforcement of underlying strengths in oil and gas income and small cap stocks. Contrarian Buy **Cimarex** (**XEC**) may be developing its next step-change in resource value with a new shale/tight oil play in remote Culberson County, Texas (see slide <u>Delaware Basin</u> on page 2). Another active West Texas producer gives indirect support to the strong ranking of XEC as the fourth most active horizontal driller despite not being among the largest traditional producers in the Permian Basin (see slide <u>Concho</u> on page 2). Buy recommended **Whiting** (**WLL**) ranks itself as the operator with the most productive wells in North Dakota's Bakken shale. The list gives indirect support to Contrarian-Buy **Enerplus** (**ERF**) ranked #3 of more than 25 drillers (see slide <u>Production by Operator</u> on page 3). Contrarian Buy **Range Resources** (**RRC**) adds further oil and gas potential to its strong base as the originator of the Marcellus Shale play, each of which is worth a separate discussion (see slide Enhancements on page 3).

Some of our favorite stocks have lost market value rapidly while others have recovered from previously depressed levels. A wise, experienced client reminds us of the virtues of concentration. The more familiar he can be with his investments the more confidence he has to act when short-term trends may be adverse. We have seen that small cap stocks commonly rise 50% from the low to the high practically every year.

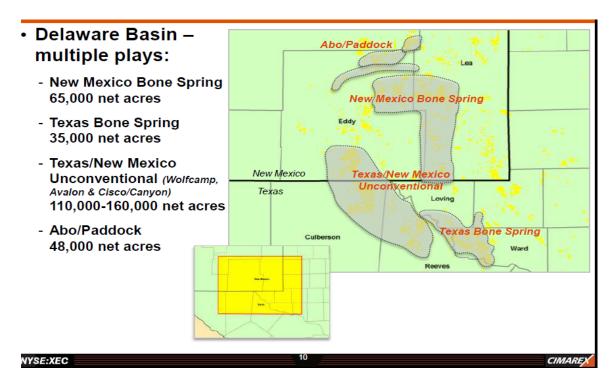

McDep Ratios are well within buy range below 1.0, while 1.0 still implies an attractive long-term return of 7% a year – unlevered and after adjustment for inflation. Ratios of Enterprise Value (EV) to Market Cap and ratios of Debt to Present Value (PV) measure financial strength (see <u>Table ISC-1</u> and <u>Table ISC-2</u> on pages 4-5). Unlevered cash flow multiples (EV/Ebitda) usually relate to reserve life except that reported reserves can be greatly understated (see <u>Table ISC-3</u> on page 6). Finally, we see that the record gap between current natural gas inventories and the historical range is beginning to narrow (see chart Underground Storage on page 7).

Enhancements to Portfolio

Range has five enhancements to the existing portfolio for 2012

- 1. Super-rich Marcellus 1,350 Btu or higher wet gas
- 2. Super-rich Upper Devonian
- 3. Wet Utica Shale
- 4. Horizontal Mississippian oil play
- 5. Cline Shale oil play

ICDEP Income and Small Cap Weekly

Analysis of Oil & Gas Stocks April 20, 2012

Working Gas in Underground Storage Compared with 5-Year Range

Disclaimer: This analysis was prepared by Kurt Wulff, Manager of McDep LLC. The firm used sources and data believed to be reliable, but makes no representation as to their accuracy or completeness. This analysis is intended for informational purposes and is not a solicitation to buy or sell a security. Past performance is no guarantee of future results.

McDep or its employees may take positions in stocks the firm covers for research purposes. No trades in a subject stock shall be made within a week before or after a change in recommendation.

Certification: I, Kurt H. Wulff, certify that the views expressed in this research analysis accurately reflect my personal views about the subject securities and issuers. No part of my compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in this research analysis.

Research Methodology/Ratings Description: McDep LLC is an independent research originator focused on oil and gas stocks exclusively. The firm applies the forty years of experience of its analyst to estimate a present value of the oil and gas resources and other businesses of covered companies. That value is compared with a company's stock market capitalization and debt. Stocks with low market cap and debt relative to present value tend to outperform stocks with high market cap and debt relative to present value. Buy recommendations are expected to deliver a total return better than 7% per year above inflation. Hold recommendations assume the attributes of the underlying business are reflected in the current price of the stock. Sell recommendations are expected to deliver a total return less than inflation.
